

FINANCIAL BENEFITS OF RCx

SIGNIFICANT ENERGY AND COST SAVINGS WITH LOW-COST IMPLEMENTATION

Retro-commissioning (RCx) often requires less capital investments to receive significant savings by optimizing existing equipment and controls to increase building efficiency. In terms of investment, RCx is among the top performers.

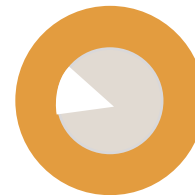

Low-Cost Implementation

Implementation measures include low to no cost operational, scheduling, and maintenance recommendations

Significant Energy Savings

Our customers typically see energy and cost savings between 5% and 10% with retro-commissioning.

Short Payback Period

The average payback period for a retro-commissioning project is typically measured in months, not years.

5% - 10% annual cost savings and a payback period of less than a year is typical
